

# Sports Video

Application: Training ground recording for sports analysis. Remote control of PTZ cameras and live streaming to IPTV.

Description: Numerous applications are shown here. Firstly 3 types of camera: IP only (eg Axis) IP plus HD-SDI and HD-SDI only. The big challenge in sports is to follow and record the player. HD-SDI is near instant video with no delay hence is ideal for viewing and tracking a player. Sports software at pitchside (eg Sportscoder or other) can record the HD-SDI using an HD-SDI to USB converter plugged into the laptop (bottom right of diagram). Antrica sports cameras also have dual outputs so the IP feed can be streamed to remote locations at the same time for viewing or recording. The ANT-36000 decoder can be used to view the cameras but also control the PTZ camera or any ONVIF camera remotely. HD-SDI only cameras can be converted to IP cameras using the ANT-35000A encoder. Streams can be sent to an existing IPTV system as MPEG-TS streams
